# Veeder-Root ATG Remote Wireless Connectivity with OptConnect

OptConnect has partnered with Veeder-Root to provide TLS-450PLUS, TLS4, and TLS3 Series Automatic Tank Gauge (ATG) customers affordable cellular connectivity to manage and monitor their fuel management systems remotely. This is perfect for sites paying a local internet provider for a static IP address. OptConnect provides a secure and reliable, monitored wireless connection to the internet that is easy, low-risk, and convenient.

Security
OptConnect has built a secure, direct Point-to-Point tunnel for Veeder-Root equipment.
All OptConnect devices are deployed with this configuration and will be plug-n-play on arrival.

Ease of Installation
Installation is as simple as connecting the OptConnect cellular router to power, fastening the antennas, and then connecting to the Veeder-Root ATG fuel monitoring system*. Operation behind a customer's firewall is not required.

Connection Dependability
OptConnect cellular routers are designed to constantly monitor their cellular connection. If it is discovered that the cellular connection has been lost, the routers have self-healing logic that will take steps to regain that connection, which includes rebooting itself.

Portfolio Management
OptConnect cellular routers continually send status information to Summit, our free portfolio management system. Summit provides a portfolio view of details such as device location, signal strength, check-in history, and the ability to reboot the router.

Complete Managed Solution
OptConnect not only provides the hardware, but also includes the cellular carrier and data plan. OptConnect provides a single point of contact with 24/7 support with live support technicians.

*ATG Compatibility: TLS-450PLUS, TLS4 and TLS3 Series Consoles

OptConnect neo2

OptConnect neo2 is a full-featured cellular router ideal for applications requiring dependable, dual-carrier high speed cellular connectivity. Its compact design allows it to fit almost anywhere, and carries with it OptConnect's completely managed wireless solutions package – including 24x7 live support and free access to OptConnect's device management portal, Summit. OptConnect's fully managed solution makes for a true headache-free experience.

Summit, The Easy Way to Manage Your Devices

Every OptConnect device includes free lifetime access to Summit, our robust, monitoring platform that enables you to have an in-depth view of your wireless portfolio. Summit allows you to get the most from your device and easily manage your connectivity from anywhere.
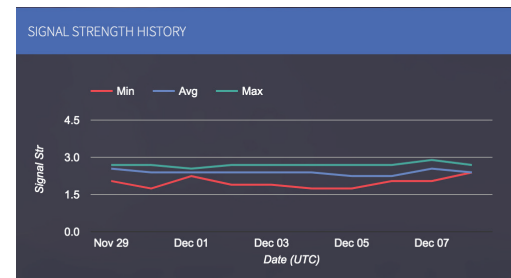

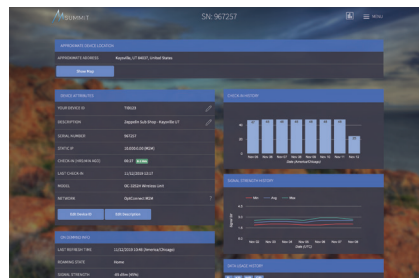

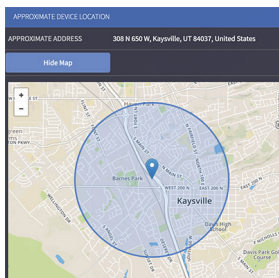

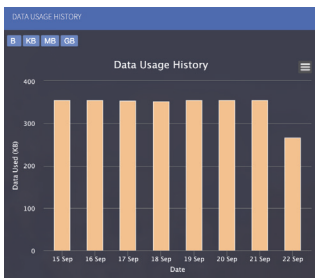

Some features include:

- View your full device portfolio in one place
- Check the signal strength of each device in real-time
- Check the health of your devices in real-time
- Custom description fields for device tracking
- Get the approximate location of your devices
- Application Programming Interface (API) integration to connect back to customer systems
- Reset wireless options from anywhere
- Receive notifications and alerts when cellular connectivity fails

OptConnect Summit: From Beginner to Expert in 15 Minutes

In this 15-minute webinar, presented by OptConnect's Director of Partner Success, TJ Carter, he demonstrates all of the incredible features and tools available in Summit.
